Allowable Subject Matter

1. Claims 1-20 are allowed.

Reason for Allowance

1. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach the following:

In regards to claim 1 the prior art does not teach receiving a temporal period associated with a wake-up schedule for a device that has a power-save mode, temporal period based on existing transmission schedules and wherein temporal period is utilized for subsequent wake-ups independent of beacons; determining, based on one or more existing schedules, whether temporal period can be accommodated, wherein temporal offset is based on existing wake-up schedules and is utilized to reduce an occurrence of concurrent wake-ups, and wherein temporal offset indicates a relative time with respect to temporal period; and when temporal period can be accommodated, determining a temporal offset for wake-up schedule, and transmitting to device a positive notice comprising temporal offset.

In regards to claim 12 the prior art does not teach transmitting a temporal period associated with a wake-up schedule for a power-save mode, temporal period based on existing transmission schedules and wherein temporal period is utilized for subsequent wake-ups independent of beacons; receiving a temporal offset in response to, wherein temporal offset is based on existing wake-up schedules and is utilized to reduce an occurrence of concurrent wake-ups, and wherein temporal offset indicates a relative time with respect to temporal period; entering power-save mode; waking up

from power-save mode in accordance with temporal period and temporal offset; and receiving a first signal when awake.

In regards to claim 17 the prior art does not teach transmitting a temporal period and a suggested temporal offset associated with a wake-up schedule for a power-save mode, temporal period based on existing transmission schedules and wherein temporal period is utilized for subsequent wake-ups independent of beacons, wherein temporal offset is based on existing wake-up schedules and is utilized to reduce an occurrence of concurrent wake-ups, and wherein temporal offset indicates a relative time with respect to temporal period; receiving a temporal offset based on at least one of: suggested temporal offset, and one or more existing schedules; entering power-save mode; waking up from power-save mode in accordance with temporal period and temporal offset; and transmitting a first signal when awake.

The prior art alone or in combination fails to jointly suggest or teach the claimed combination of features as taught by the instant application. Therefore claims 1-20 are to be deemed allowable over prior art.
